Release Notes for SimplerQMS Patch 3.6.0

Improvements

ID	Summary	Details
SQ-1126	Support for Multiple Application Integrations	Support for multiple application integrations has been added. Previously, SimplerQMS could be configured to integrate with only a single external application. This enhancement provides greater flexibility for organizations integrating SimplerQMS with multiple external systems, making it easier to manage and maintain several integrations within the same environment.
SQ-499	Advanced Document Comparison	An Advanced Document Comparison feature has been introduced, allowing users to compare different versions of documents more effectively. This enhancement makes it easier to identify changes between document versions, improving review efficiency and helping users quickly understand what has been modified.
SQ-1123	Quiz 2.0 Report	A new Quiz 2.0 Report feature has been added, allowing quiz collaborators to generate an Excel report containing all user quiz attempts for a selected released quiz. The report includes training records, individual attempts, and details of correct and incorrect answers. This enhancement provides greater visibility into quiz performance by giving collaborators a comprehensive overview of user attempts and results. The generated report simplifies analysis, supports training follow-up, and makes it easier to identify questions that users frequently answer incorrectly.

Bug Fixes

ID	Summary	Details
SQ-1089	Retired PDF Watermark Missing	Fixed an issue where PDF processing could occasionally fail for retired documents, preventing the Retired watermark from being applied. The SimplerQMS application has been enhanced to automatically detect and reprocess failed PDF conversions, ensuring retired documents and retired document versions consistently receive the correct watermark.
SQ-1122	Comment Dashboard No Longer Opens Automatically	Fixed an issue where the Comment Dashboard automatically opened whenever a document was selected. The Comment Dashboard will no longer receive automatic focus, providing a less disruptive and more intuitive user experience when navigating documents.
